

Innovation - High Altitude

We bring high altitude into your stable, clinic or any other closed room at your farm. Lowoxygen Systems has the only technique in the world to create an artificial hypoxic atmosphere quickly and permanently in any closed room, independent of room size.

Benefits of high altitude training:

- Improved aerobic power and endurance
- Faster recovery
- Increased production of red blood cells
- Lower lactate level and higher aerobic thresholds
- Faster rehabilitation after injuries

We design your individual high altitude training center.

LOWOXYGEN SYSTEMS

By Lowoxygen Systems – sales partner BEST Equine GmbH (Belinda Hitzler)

Training Facilities

Treadmill:

From Horsegym2000 trott, canter with automatic height adjustment. Absolutely safe for horses.

Blue Edition

Galop

Aquatainer:

From Horsegym2000 in 2 different sizes, innovative water filter system

MLT – VET Model 2011

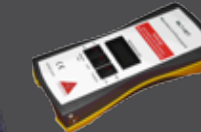

Magnetic Field-Light-Therapy Device

For Use in Veterinary Medicine

The magnetic field blanket raises the well-being of the horse and provides faster recovery during and after the competition. No doping!

**Belinda Hitzler, BEST Equine CEO
German Champion**

„For more than 10 years, I am training and riding many different horses, up to high level in international endurance races all over the world. Therefore we use only the BEST training facilities to keep our Champions fit and healthy for a long time.“

Stephan Schelldorf, BEST Equine CEO:

We build up our horses, some from our own breeding, from zero and made them to Champions. Do not waste time and money with second-class training solutions and use our know-how and experience.“

Intelligent Training Facilities for Horses

Horse Walker

Our horse walkers can be installed with or without roof. The roof matches exactly the construction of the walker and protects the horses from sun, rain and snow. Moreover it always keeps the best condition for the footing in the exercise area, while allowing natural lightning and excellent ventilation.

Different Models:

Horse walker for 4-5-6 and 8 horses
Diameter: 12 m; 14,4 m; 16 m; 17,6 m, 19,2 m

Technical Details horse walker:

- single phase engine 0,75 Kw
- different programs for walk and trot
- automatic change of direction
- aluminium arms and safety guards
- electricity on safety guards
- automatic sprinkler- timing between 60 and 220 meters per minute
- power supply: 200-240 Volt single phase.

Technical Details roof including fence for horse walker:

- hot-dipped galvanised steel construction (snow load max. 80kg/m²; wind force max. 90 km/h)
- in- and outside fence marine plywood (thickness 19 mm), waterproofed glued together.
- roof PVC Tent, UV resistant in different colours
- installation without foundation, with ground anchors

Technical Details plastic fence for horse walker:

- outside fence with 3 crossbars, white Polypropylen, height 1,60 meters.
- Inside fence with 2 crossbars, white Polypropylen, height 1,35 meters.
- Door with 3 crossbars, in Aluminium, width 1,80 meters.

Longing Hall

Technical Details:

- hot-dipped galvanised steel construction (snow load max. 100 kg/m²; wind force max. 120 Km/h.)
- in- and outside fence marine plywood (thickness 19 mm), waterproofed glued together, height 1,4 m
- roof PVC Tent, UV resistant in different colours
- installation without foundation, with ground anchors

Diameter: 13,2 m, 15 m, 16,64 m, 18,3 m, 19,95 m
